
Mission Statement

The mission of YCC Scotland is to enhance and safeguard the public's health in Scotland by seeking to minimise the adverse effects of medicines. To meet this objective we will seek (i) to raise the profile of adverse drug reactions (ADRs) as an important health issue amongst both professionals and the public in Scotland, (ii) to enhance the quality and quantity of spontaneous ADR reports, (iii) to improve education about ADRs for undergraduates and clinicians, and (iv) to promote research that facilitates better understanding of the causes, effects and avoidance of ADRs.
